SÉMINAIRE PHILIPPE FLAJOLET

(ANNULÉ) Skipless chain decompositions and antichain saturation

IHP

INSCRIPTION

The Boolean lattice is the poset $\{0,1\}^n$ ordered via set inclusion. We show that given disjoint chains C_1, \dots, C_m in the Boolean lattice, we can create m disjoint skipless chains that cover the elements in $\cup_{i=1}^m C_i$ (where we call a chain skipless if any two consecutive elements differ in size by exactly one). This strengthens a result of Lehman-Ron [JCT-A, 2001]. We find a simple proof for the asymptotics of antichain saturation numbers as corollary (resolving various conjectures), and with additional work can even pinpoint most values exactly. This is based on joint work with Paul Bastide, Hugo Jacob and Tom Johnston.

INSTITUT HENRI POINCARÉ - UAR839

Sorbonne Université / CNRS
11 rue Pierre et Marie Curie
75231 Paris Cedex 05

HORAIRES

L'institut :

- lundi au vendredi de 8h30 à 18h,
- fermé les jours fériés.

Le musée - Maison Poincaré :

- lundi, mardi, jeudi et vendredi de 9h30 à 17h30,
- samedi de 10h à 18h,
- fermé le mercredi et le dimanche.
