INSCRIPTION

Grigory Mikhalkin (Genève)
On tropical enumeration of curves

In this talk I will give an elementary introduction to tropical techniques in classical enumerative geometry. We'll consider several examples, in particular, enumeration of rational plane sections of a quartic surface in $\mathbb{P}^3$ and that of lines on a cubic 3-fold in $\mathbb{P}^4$. The talk will also compare enumeration in real and in complex geometries.
