SÉMINAIRE BOURBAKI DU VENDREDI

Omar Fawzi — The computational complexity of (quantum) two-prover games

IHP
Darboux

INSCRIPTION

I will present the simple concept of two-prover games which has been extremely fruitful in complexity theory and in quantum information. In complexity theory, one way of stating the famous PCP theorem is that computing the optimal winning probability of two-prover games, even approximately, is hard. In quantum information, Bell's celebrated theorem can be phrased as a two-prover game for which there is a quantum strategy achieving a winning probability that is strictly larger than any classical strategy. I will try to present these two points of view.

INSTITUT HENRI POINCARÉ - UAR839

Sorbonne Université / CNRS
11 rue Pierre et Marie Curie
75231 Paris Cedex 05

HORAIRES

L'institut :

- lundi au vendredi de 8h30 à 18h,
- fermé les jours fériés.

Le musée - Maison Poincaré :

- lundi, mardi, jeudi et vendredi de 9h30 à 17h30,
- samedi de 10h à 18h,
- fermé le mercredi et le dimanche.
